## CONNECTING

Following the steps to properly connect the USB Flash Disk JVJ X8 to your computer:

1. Power on your PC or Notebook.
2. Connect the USB Flash Disk JVJ X8 to free USB port on your PC or notebook. You can also use the extended cable to connect between the USB Flash Disk JVJ X8 and your PC/Notebook.

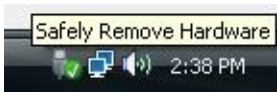

3. No additional driver installation is required. Driver will be installed automatically, and the USB Flash Disk JVJ X8 will be ready for use.

## DISCONNECTING

You don't need to shutdown your computer to disconnect the USB Flash Disk, but to avoid losing data you should never remove the device from the USB port while the LED is flashing. If a drive window is open, closed any associated windows before attempting to remove your USB Flash Disk JVJ X8.

Use the "Safe to Remove Hardware" hotplug icon in the notification area of the taskbar where you usually see the current time displayed.

1. In the notification area, click on the " Safe to Remove hard ware" hotplug icon.

2. Select the device you want to unplug, and then click Stop.
3. When Windows notifies you then it is safe to do so, unplug the USB Flash Disk from your computer

## **FREE SOFTWARE GIFT**

### **Simple Passwords:**

Tired of forgetting passwords for your favorite sites, mails, FTP accounts? Here is one for you, SimplePasswords. Now you can organize all your passwords into categories, add notes and carry it on your USB stick. It's a simple password manager. SimplePasswords encrypts all data with TripleDES block cipher so you don't need to worry about anyone seeing your data. With Simple Passwords and JvJ X8 you can easily store and manage your passwords.

### **Portable Antivirus**

This small anti virus is capable of removing certain variants of virus, Trojans, ad-ware and spy ware from your computer. It's free to use, and free to distribute. This small anti virus is built to detect and remove viruses that currently spread in the wild. It won't detect all viruses (such as old 80's viruses). Besides, it's almost impossible for a virus from that period to infect a PC that's running an NT-based system, e.g. Windows XP or Vista. It would not be considered wild at any rate, perhaps a lab-created experimental virus only and would not represent a serious risk globally.
